                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHL19W, testis NHT, and B-cell NCI_CGAP_GCB1) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Benaldo. "

The genes are significantly homologous with organic cation transporters OCT1 and OCT2. The genes may used in drug development, particularly in the treatment of diseases due to abnormality of the organic cation transporter functions e.g. fatty liver, heart diseases and cancers, by controlling such as by inhibition or activation. Administration of anti-tumour and anticancer drugs in combination with a transporter protein inhibiting agent allows the agents to penetrate into the diseased cells to enhance the drug action.
       Organic cation transportation; human; OCTN2; diagnosis; systemic carnitine;
                             Human carnitine

This sequence represents the human carnitine transporter protein OCTN2 The coding sequence can be used as a target for diagnosis of systemic carnitine deficiency by detecting the presence of mutations in the sequence, especially seen in the disease juvenile visceral steatosis (jvs). The wild type OCTN2 gene can be used in the gene therapy of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   disease state.

RESULT ARBOJOLS ID ARGONOLS ACC ARGONOLS ACC ARGONOLS ARGONOLS ACC ARGONOLS                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and C polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The C polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC in restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO CC at fig. wipo.int/pub/published_pct_sequences.
